Redstone

Calgary, Alberta

PROJECTS

L A West

With its identity founded on active outdoor lifestyle, this northeast neighborhood's core is comprised of a significant open space system designed with pedestrian connectivity, fitness and active recreational in mind. The park network is intended to link local residents with the various commercial and neighborhood nodes located within the community.

LA West was asked to accommodate these basic pedestrian necessities while still providing a vibrant and aesthetic experience for the end user. As with most of our community projects, the open space master plan established the primary identity for Redstone. Planning, engineering and architectural designs were influenced by the landscape architecture.
