

# South Station Fire Hall

Fort McMurray, Alberta

Required to meet the needs of the growing Regional Municipality of Wood Buffalo, the South Station (No. 5) Fire Hall will be an all inclusive training, dispatch and post-disaster facility. Working with Sahuri & Partners, L A West and a small team of consultants are charged with designing a cost efficient LEED gold development for the municipality.

Our design tasks on the project include high efficiency irrigation and pump design with storm water reuse, site grading and infiltration analysis, surface permeability measures, and select variety plant designs for water conservation.
